

Amendments to the Claims

Please amend the claim as follows:

1-16 (Canceled)

17. (Currently amended) A system for remote measurements, the system comprising:

(a) a measuring device, wherein the measuring device comprises a communication module for wirelessly transmitting measured parameters and receiving data and instructions;

(b) a portable wireless gateway, wherein the portable wireless gateway comprises a wireless module for wirelessly communicating with the measuring device and a computer interface module for communicating with a computer;

(c) a computer (PC) with a standard port to which the portable wireless gateway is connected to;.

18. (Original) The system of claim 17, further comprising

(d) a central server being operative to communicate with the PC and to store and analyze measured data; and

(e) a computer network between the computer (PC) and the central server for carrying the communication between the two.

19. (Currently amended) The system of claim 17, wherein the measuring device measures at least one medical parameter of ~~the~~ at least one user

20. (Currently amended) The system of claim 17, wherein the portable wireless gateway is ~~in a shape of a USB flash disc device~~ a USB dongle.

21. (Original) The system of claim 17, wherein the portable wireless gateway stores personal information of a user of the system.

22. (Original) The system of claim 21, wherein the personal information stored in portable wireless gateway is used for at least one function selected from a group consist of: authentication and encryption

23. (Original) The system of claim 21, wherein the personal information contains medical data of the user

24. (Original) The system of claim 17, wherein the portable wireless gateway emulates a USB flash memory disk device

25. (Original) The system of claim 24, wherein the portable wireless gateway stores the software that will be used by the PC for operating the system.

26. (Currently amended) The system of claim 25, wherein the computer (PC) operates the software from the emulated USB flash memory disk device

27. (Original) The system of claim 25, wherein the computer (PC) does not install the software.

28. (Original) The system of claim 25, wherein the software analyzes measured data and alerts the user

29. (Original) The system of claim 17, wherein the measuring device is wearable by ~~the~~ user.

30. (Currently amended) The system of claim 18 wherein the computer ~~networks~~ network is the Internet.

31. (Original) The system of claim 17, wherein the measuring device is further comprising a movement sensor.

32. (Original) The system of claim 31, wherein the movement sensor is adapted for measuring the user's breathing.

33. (Original) The system of claim 17, wherein the measuring device is further comprising a smoke detector.

34. (Original) The system of claim 17, wherein the measuring device is further comprising a burglary alarm

35. (Original) The system of claim 17, wherein the computer standard port is a USB port.

36. (Currently amended) A portable wireless gateway suitable for use within a remote medical monitoring system that comprises a measuring unit, a computer connected to a computer network and a central server connected over the computer network, the portable wireless gateway comprising:

- a wireless communication unit operative to communicate with the measuring unit;
- a non-volatile memory module;
- a computer interface module operative to connect to the computer; and
- a processing unit,

wherein after connecting the portable wireless gateway to the computer the portable wireless gateway communicatively coupled via the wireless communication unit with the measuring unit, and in response to instructions, the processing unit being

operable to receiving physiological data from the measuring unit through the wireless communication unit; processing the received physiological data and transferring the processed physiological data to the computer via the computer interface module;

whereby connecting the portable wireless gateway to a computer the computer becomes a part of the remote medical monitoring system during the period of the connection.

37. (Original) The portable wireless gateway of claim 36, wherein the connection between the portable wireless gateway and the computer is USB connection.

38. (Currently amended) The portable wireless gateway of claim 36, wherein the portable wireless gateway is ~~in a shape of a USB flash disc device~~ a USB dongle.

39. (Original) The portable wireless gateway of claim 36, wherein the non-volatile memory module stores personal information of the user.

40. (Original) The portable wireless gateway of claim 36, wherein the non-volatile memory module stores the software that will be operated by the computer for operating the remote medical monitoring system while connected to the portable wireless gateway.
